S&G Labs Hawaii has answered the call to fight against COVID-19. Bringing our considerable experience, education, and innovation to bear down on the COVID-19 pandemic, S&G Labs has shifted massive amounts of resources and manpower to accomplish this swiftly. Through tireless weeks of work by the entire S&G Labs team, we are extremely relieved, grateful, and passionate to announce that S&G Labs is engaged in ending the Coronavirus in our community.

S&G Labs collection kits are unique and innovative. They are created in-house allowing us to keep up with demand. The S&G Labs collection kit inactivates the virus in the vial after collection. Other collection kits allow the virus to stay active adding risk to already at-risk health and laboratory workers. S&G Labs collection kits allow us to test for the virus without it threatening the safety of essential employees. This adds much-needed protection to all health workers involved in the testing process. S&G Labs is also set up to produce and report rapid results in our lab.

With limited fully equipped labs in Hawaii capable of testing for COVID-19, the high demand has caused massive amounts of over-flow tests to be sent to Mainland labs. This increased turnaround time, in turn, forces patients who are not considered "urgent" to wait critical days in the dark.

As S&G Labs begins to bring this essential technology to not just Oahu, but Maui, Kauai and the Big Island as well, we bring real-time results without shipping or other delays. Instead, we offer results for COVID-19 in one to two-day turnaround time once received in the lab! S&G Lab's on the ground team and fully equipped lab make us the perfect fit and leading champion to assist in winning the war over COVID-19 in our Hawaiian Islands.

As a physician, my calling is to help bring wellness to our community. With our FDA approval to test for COVID-19, I, along with my entire S&G Labs team look forward to slowing the Coronavirus in our community and quickly ending it altogether.

Mahalo Nui Loa,
